

Capabilities Statement

Core Competencies

As a business development specialist, Dualos partners with the largest and most respected Test & Measurement Instrumentation and Control, Avionics Test and Simulation and Mil/Aero RF Communications Test and Assurance solutions to deliver the best value to our customers.

Established 12 years ago, Dualos provides guidance and leadership in supply chain management and risk mitigation through managed workflow and oversight. Dualos has the financial strength to manage any level of purchase supported by a robust infrastructure enabling us to serve as a prime, sub-prime or centralized supplier consolidator.

Past Performance

Past performance is an excellent indicator of future success. Dualos strives for 100% quality in all we do by constantly reviewing and improving QMS processes with relentless scrutiny. Customers continue to recognize Dualos as; Excellent, Superior, Outstanding, and Gold within their respective Supplier Quality Management Systems.

Differentiators

Through thought leadership, leveraging Dualos' deep domain subject matter expertise, we take an engineering consultative approach to support R&D efforts through production and maintenance.

Dualos' go-to-market strategy team is made up of industry test and measurement veterans each having vast experience within the military, aerospace and government sectors. We enable reputable Original Equipment Manufacturers to enter or expand their commercial off the shelf solutions into the US government ecosystem. Having a deep understanding of inner government workings and requirements to efficiently conduct business. Dualos is well positioned to broadly lead our partners' businesses development and marketing activities. We are a results driven, transparent, trustworthy team always keeping the best interest of our partners and customers at the forefront in all we do. Our customers have come to rely on Dualos' no nonsense approach in solving their most challenging test requirements. We bring the best and most reliable solutions to solve ever evolving lab and production challenges.
